

Environmental Product Declaration

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019/AC:2021 for:

Water painted pipes, epoxy or polyester coated pipes with plain, Victaulic OGS grooved or threaded & coupled ends - EAF

from

Amenduni Tubi Acciaio S.r.l. at the Zinchitalia S.p.A. plant.

Programme:	The International EPD System, www.environdec.com
Programme operator:	EPD International AB
Type of EPD:	EPD of multiple products, based on the average results of the product group. It covers products treated with powder coating and products treated with liquid paint. EPD of product not yet on the market – Results of this EPD shall be used with care as the LCI data is not yet based on 1 year of production which may result in increased uncertainty.
EPD registration number:	EPD-IES-0026890
Version date:	2026-01-28
Validity date:	2031-01-28
An EPD may be updated or depublished if conditions change. To find the latest version of the EPD and to confirm its validity, see www.environdec.com	

GENERAL INFORMATION

Programme Information

Product Category Rules (PCR)
CEN standard EN 15804 serves as the Core Product Category Rules (PCR)
Product Category Rules (PCR): <i>Construction products, 2019:14, version 2.0.1</i> UN CPC Code: <ul style="list-style-type: none"> • 41285 - Line pipe of a kind used for oil or gas pipelines, welded, of steel • 41286 - Casing and tubing, of a kind used in the drilling for oil or gas, welded, of steel • 41287 - Other tubes and pipes, of circular cross-section, welded, of steel
PCR review was conducted by: The Technical Committee of the International EPD System. A full list of members is available on www.environdec.com . Review chair: Rob Rouwette (chair), Noa Meron (co-chair). The review panel may be contacted via the Secretariat www.environdec.com/contact .

Third-party Verification
Independent third-party verification of the declaration and data, according to ISO 14025:2006, via:
<input checked="" type="checkbox"/> Individual EPD verification without a pre-verified LCA/EPD tool Third-party verifier: Guido Croce Approved by: International EPD System
Procedure for follow-up of data during EPD validity involves third party verifier: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

The EPD owner Amenduni Tubi Acciaio S.r.l. has the sole ownership, liability, and responsibility for the EPD.

Technical support and LCA study development: Studio Fieschi & Soci S.r.l. – www.studiofieschi.it

EPDs within the same product category but published in different EPD programmes, may not be comparable. For two EPDs to be comparable, they shall be based on the same PCR (including the same first-digit version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have identical scope in terms of included life-cycle stages (unless the excluded life-cycle stage is

demonstrated to be insignificant); apply identical impact assessment methods (including the same version of characterisation factors); and be valid at the time of comparison.
For further information about comparability, see EN 15804 and ISO 14025.

INFORMATION ABOUT EPD OWNER

Owner of the EPD: Amenduni Tubi Acciaio S.r.l.

Address:

Amenduni Tubi Acciaio S.r.l.

Address:

Registered office:

Corso Porta Nuova, 20 - 20121 Milano

P. IVA/ COD. FISC. 06651880962

Operative office:

Via G. Mazzini 240/242

25020 Alfianello BS

Contact: Diego Patella, ata.srl@arubapec.it

Address and contact information of the LCA practitioner commissioned by the EPD owner:

Alba Serafini, Laura Cannatà, Eugenia Bertolino

Studio Fieschi & Soci – Tinexta Innovation Hub

Corso Vittorio Emanuele II, 18 10123 Torino, Italy

Description of the organisation:

Zinchitalia is located in the Brescia province, in the heart of Lombardy.

Our company, characterized by a high production flexibility, produces galvanized, water painted, epoxy painted and polyester painted welded carbon steel pipes with plain, Victaulic OGS grooved or threaded & coupled ends (gas or API) according to EN 1022, EN 10219, EN 12899, API 5L, ASTM A 106 and EN 10240. Our pipes are suitable for water pipelines, greenhouses, fire – fighting, road signs, wells, sonic tests, mechanical and hydraulic equipments, heat exchangers and much more. Our products are highly appreciated both in Italy and abroad, mainly in Europe.

Product-related or management system-related certifications:

Zinchitalia holds the TÜV ISO 9001:2015 system certification.

PRODUCT INFORMATION

Product name: Water painted pipes, epoxy or polyester coated pipes with plain, Victaulic OGS grooved or threaded & coupled ends - EAF. (product not yet on the market)

Product identification: Water painted pipes, epoxy or polyester coated pipes with plain, Victaulic OGS grooved or threaded & coupled ends to be used in constructions, fire-fighting, civil and industrial installations, methane gas distribution network. The products are manufactured with steel from electric arc furnace and are identified by an "E" in the identification code.

Visual representation (e.g., an image) of the product

Figure 1: visual representation of the product

UN CPC code:

41285 - Line pipe of a kind used for oil or gas pipelines, welded, of steel

41286 - Casing and tubing, of a kind used in the drilling for oil or gas, welded, of steel

41287 - Other tubes and pipes, of circular cross-section, welded, of steel

Product description:

The production process takes place in the following phases:

- ⇓ Possible grooving;
- ⇓ Possible threading (it can be performed before or at the end of the entire painting process);
- ⇓ Mechanical sandblasting of the raw tube;
- ⇓ Painting process (water-based paint, epoxy or polyester);
- ⇓ Drying process of the painted tube;
- ⇓ Packing in hexagonal bundles and strapping.

Name and location of production site: The product is manufactured at the Zinchitalia plant, located at Via Mazzini, 210, 25020 Alfianello BS.

In case of EPDs owned by a trader, the location of the final process in direct control of the trader: NA

Name of manufacturer: Zinchitalia, part of Amenduni Tubi Acciaio S.r.l.

References to any relevant websites for more information or explanatory materials, if applicable:
<https://www.amendunitubi.it>

CONTENT DECLARATION

The product is entirely realized in recycled steel produced through electric arc furnace. The minimum total recycled material content (pre- and post-consumer) is 86,8%, calculated as a weighted average based on the supply mix of semi-finished tubes. Specifically, for the calculation of the environmental

profiles of the aforementioned products, the supply from Alessio Tubi S.p.A. and Tecnotubi S.p.A. is considered representative.

Product content	Mass, kg	Post-consumer recycled material, mass-% of product	Biogenic material, mass-% of product	Biogenic material, kg C/product or declared unit
Carbon steel	994	0,92%	0,0%	0,0
Paint	6	0%	0,0%	0,0
TOTAL	1000	0,92%	0,0%	0,0

Packaging materials	Mass, kg	Mass-% (versus the product)	Biogenic material, kg C/product or declared unit
Galvanized steel	1,07	0,11%	0,0
LDPE	0,03	0,003%	0,0
TOTAL	1,09	0,11%	0,0

For construction products with EPDs compliant with the EN 15804 standard, the EPD must declare the substances contained in the products that are listed on the "Candidate List of Substances of Very High Concern for Authorization" when their content exceeds the thresholds for registration with the European Chemicals Agency (0.1% by weight/weight).

The product does not contain any substances listed on the SVHC list.

LCA INFORMATION

Declared unit: 1 ton of painted and packaged steel tube, ready for shipment (average profile calculated as the arithmetic mean between the most and least impactful profiles among the different configurations. Specifically, the highest profile is given by the product painted with liquid paint with the highest paint/steel ratio; the lowest profile is given by the product painted with powder paint with the lowest paint/steel ratio.

Reference service life: NA

Time representativeness: All data related to product composition, manufacturing, and distribution refer to the year 2023, while the steel supply and energy consumption data have been updated to 2025, reflecting the current pool of EAF (Electric Arc Furnace) recycled steel suppliers..

Secondary data represent the most recent information available at the time of the study and cover the period 2019–2024.

Geographical scope: Europe for raw material supply, Italy for manufacturing, Europe for end-of-life.

Database(s) and LCA software used: Ecoinvent v.3.10, SimaPro v.9.6.0.1.
 EN 15804 method based on EF 3.1 of JRC characterization factors has been used.

EPD/LCA Tool used: NA

Description of system boundaries:

Cradle to gate with modules C1–C4 and module D (A1–A3 + C + D).
 Module A5 and modules B1-B7 are excluded.

The system boundaries include:

- **A1 - Raw material supply:** Production of raw materials and semi-finished steel products, as well as other components required for product manufacturing (e.g., paints);
- **A2 - Transport:** Transportation of raw materials (semi-finished products, purchased components) to the company's production site;
- **A3 - Manufacturing:** Manufacturing of the products at the company's production site. Production and consumption of electricity used in manufacturing processes. Production and consumption of fossil fuels used for internal product handling and for the management of waste (including packaging waste) generated by the plant. The processing steps included in this module are:
 - Possible grooving;
 - Possible threading (it can be performed before or at the end of the entire painting process);
 - Mechanical sandblasting of the raw tube;
 - Painting process (water-based paint, epoxy or polyester);
 - Drying process of the painted tube;
 - Packing in hexagonal bundles and strapping.
- **C1 - Deconstruction, demolition:** Deconstruction or demolition process;
- **C2 - Transport:** Transport of waste to treatment/disposal facilities;
- **C3 - Waste processing:** Waste treatment for recovery/recycling preparation,
- **C4 - Disposal:** Final disposal.

Module D - Reuse, recovery, recycling, potential: Potential benefits and loads from material and energy recovery, reuse, and recycling throughout the product life cycle. This module includes the assessment of benefits and/or impacts associated, for example, with the potential recycling of materials at the end-of-life stage of the studied products.

The modelling of recovery/reuse/recycling benefits is carried out in accordance with the requirements of EN 15804:2012 + A2:2019 § 6.4.3.3.

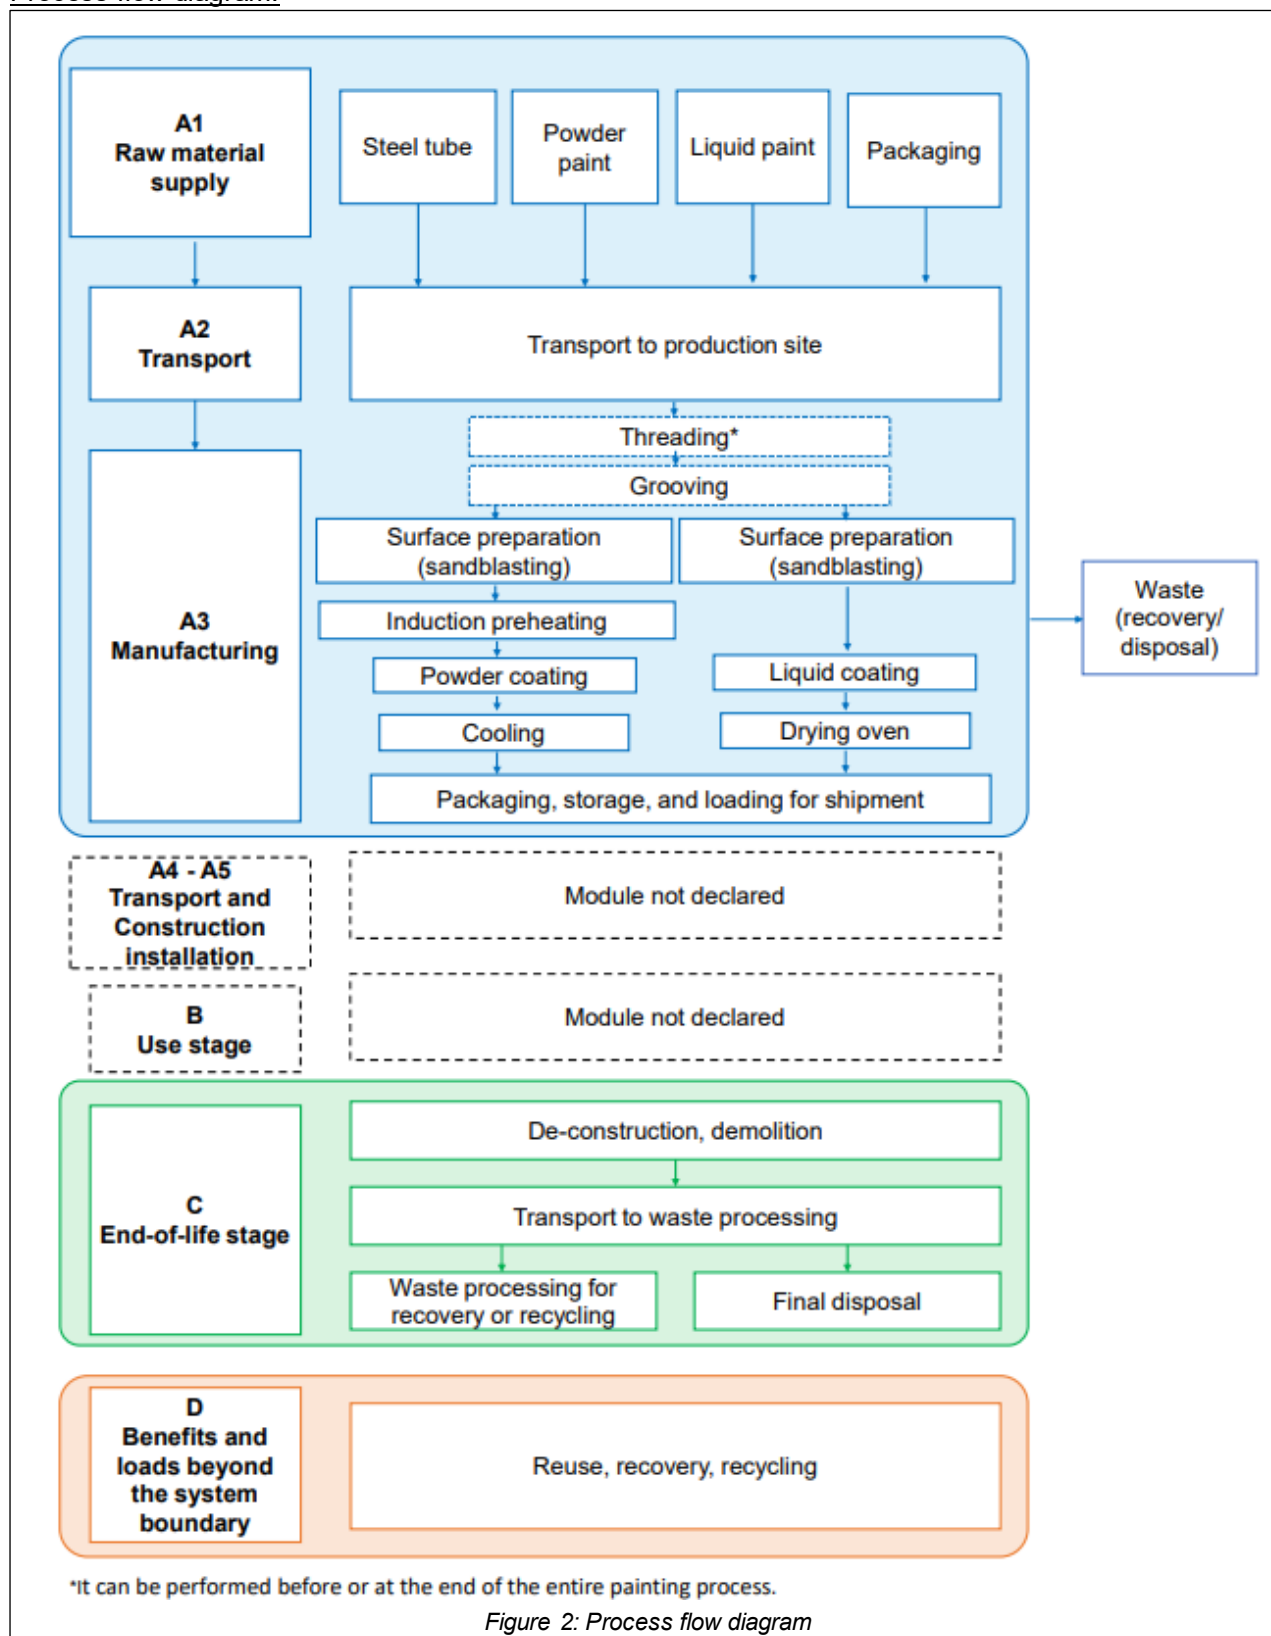

The system boundaries do not include:

- Modules A4–A5 related to the product distribution and installation phases;
- Impacts related to personnel (e.g., commuting to and from work, office electricity and water consumption, etc.);
- Impacts related to the production and transportation of packaging materials for incoming semi-finished products;

- Infrastructure and capital goods, with exception for electricity and heat in module A3 and electricity/heat for steel production¹, in accordance with the requirements of PCR 2019:14 (§4.3.6).

¹ The exclusion of capital goods and infrastructure is limited to the main processes (foreground processes, directly modeled in the study). Impacts related to these processes may still be included in the background data (e.g., Ecoinvent data).

Process flow diagram:

More information:

Modules C and D are modelled according to the distribution volumes of the product around the world

Cut-off criteria:

The cut-off rules in EN 15804:2012 + A2:2019 §6.3.6 and PCR 2019:14 §4.4 apply.

No contribution has been voluntarily excluded from the study.

Allocation rules:

In the case of multifunctional situations, i.e., systems that generate multiple products, the allocation rules set out in PCR 2019:14 apply.

A mass allocation was made to the entire production (in terms of tonnes) for general plant consumption - electricity, fuels, auxiliary materials, water - that could not be attributed to specific product lines; company outputs - waste, emissions - were also allocated to the entire production of the reference year. Where it was possible to associate energy or material consumption quotas with a specific product, these were allocated entirely to the product itself.

Modeling of infrastructure/capital goods:

In accordance with Section 4.3.6 of PCR 2019:14 version 2.0.1, the datasets used for modelling electricity and heat include the impacts associated with the construction of the related infrastructure.

Reuse/Recycle of materials rules:

For the flows leaving the system boundaries, the “polluter pays” principle applies.

According to this principle, the impacts associated with the production of recycling flows are borne by the system that generated them up to the point when they reach the end-of-waste state (PCR 2019:14 §4.5.2). Downstream impacts (e.g. impacts from processes for preparing secondary raw materials) are borne by the system that uses the secondary material.

Therefore, depending on the destination of the material, the following impacts have been assigned:

- Recycling: impacts from transport to the recycling preparation plant and recycling preparation;
- Landfilling: impacts from transport to landfill and disposal.

Consequently, recycled materials enter the system associated with the impact of recycling, but not with that of the recycling preparation phase.

According to EN 15804 §6.3.5.2, waste streams leaving the system and reaching the end-of-waste state within stages A1–A3 must be allocated as co-products. For this EPD, and in accordance with PCR 2019:14 §4.5.1, a precautionary approach has been adopted and no allocation of environmental flows to such co-products is applied; all impacts are instead attributed entirely to the main products.

The recycled steel used for the manufacturing of the pipe has an impact on the GWP-GHG indicator of 1.023 kg CO₂ eq./t.

Electricity mix:

The electricity purchased from the grid in the production phase was modelled using the Italian residual mix. The GWP-GHG of the electricity mix used by Zinchitalia is 0.559 kg CO₂ eq./kWh.

Assumptions for end-of-life scenarios (modules C1-C4):

Module C1: The demolition process requires energy to operate the excavators and other machinery needed for the process. In accordance with PCR 2019:14 §4.8.4, it is assumed that the energy source used for this purpose is diesel fuel and that the average energy consumption at this stage is 1.1 kWh/ton.

Module C2: For the transport of materials to treatment facilities for recovery or to landfill, a distance of 80 km travelled by land using a 16–32 tonne Euro 5 truck has been assumed, in accordance with PCR 2019:14 §4.8.4. Transport has been modelled on the basis of the geographical reference area, taking into account the typical market distribution of the product.

Module C3-C4: the end-of-life scenario includes all operations necessary to treat the product until the end-of-waste status is reached.

The following considerations apply:

- The product is composed of steel only; specific end-of-life scenarios distinguishing between recycling and landfilling are applied for this material. No energy recovery is foreseen;
- The share of material sent for recycling is derived from the Product Environmental Footprint (PEF);
- The share of material sent for disposal is deduced from the PEF data on recycling; it is assumed that the same breakdown is also applicable to the foreign scenario.
- In accordance with PCR 2019:14 §4.8.4, for Module C3 - Waste Processing, an average diesel consumption is assumed, consisting of 1.8 kWh/ton for Loading and unloading at sorting facility and 7.4 kWh/ton for the Fragging of steel. An average electricity consumption of 2.2 kWh/ton is also assumed for Mechanical sorting.
- In accordance with PCR 2019:14 §4.8.4, for Module C4 – Disposal, it is assumed an average diesel consumption of 1.6 kWh/ton for Compacting of inert construction waste for landfills (including backfilling).
- Modules C and D have been modelled based on the product's distribution volumes.

Modules declared, geographical scope, share of primary data (in GWP-GHG results) and data variation (in GWP-GHG results):

	Product stage			Distribution/ installation stage		Use stage							End-of-life stage				Beyond product life cycle
	Raw material supply	Transport	Manufacturing	Transport	Construction installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling- potential

Summary of Data Quality Assessment:

As required by section 4.6.5 of the PCR, the following table provides a summary of the data quality assessment (DQA) for the datasets that contribute to at least 80% of the results for each of the declared environmental impact indicators.

Data Quality Aspect	Details / Description
Data Quality Scheme	EN 15804:2012+A2:2019, Annex E, Table E.1
Use of poor/very poor data	-
Use of Fair data with more than 30 % of a core impact	-
Data Collection period for raw data	All data related to the composition, manufacturing, and distribution of the product refer to the year 2023. Data related to steel supply refer to 2024, as the product is not yet on the market and is based on a 100% EAF recycled steel supply.
Geography	Europe for raw material supply, Italy for manufacturing, Europe for end-of-life.
Geography and technology	The product is manufactured by Zinchitalia, part of Amenduni Tubi Acciaio S.r.l., at its plant located in Alfianello, Italy. This EPD covers multiple products like water painted pipes, epoxy or polyester coated pipes with plain, Victaulic OGS grooved or threaded & coupled ends. All these products are intended for various applications across different sectors such as civil, industrial, gas distribution network and others. The results are referred to an average profile.

	The manufacturing processes are represented comprehensively, from possible preliminary treatments like grooving, through intermediate operations such as painting and drying, to final packing. The modeling considers all relevant aspects of the production processes, including energy and auxiliary material consumption, as well as the geographical context of the manufacturing activities (Italy).
LCI/LCA database	Ecoinvent v.3.10, SimaPro v.9.6.0.1
EPD used	-
Other informations	The end-of-life scenario has been modelled in accordance with PCR 2019:14 §4.8.4. The modeling includes the energy required for product dismantling, as well as the transport to treatment facilities or landfills, considering the market distribution of the product. Since the product is entirely made of steel, specific end-of-life scenarios distinguishing between recycling and landfilling have been applied, with no energy recovery assumed. The shares of recycled and disposed material are based on Product Environmental Footprint (PEF) data. The modeling also accounts for energy use during waste processing and disposal activities, in line with the assumptions described in PCR 2019:14.

The data quality information presented in this EPD has been prepared and reported in accordance with the requirements set forth in UNI EN 15941:2024 and complies with the data quality criteria specified in EN 15804:2012+A2:2019.

As requested by PCR, the following table provides information on the quality of the data used for processes contributing more than 10% to the overall GWP-GHG indicator value for the product considered.

Process	Source type	Source	Reference year	Data category	Share of primary data, of GWP-GHG results for A1-A3
Generation of electricity used in manufacturing of product	Database	Ecoinvent v3.10, AIB 2025	2024	Primary data	5%
Transport of steel to manufacturing site	Database	Ecoinvent v3.10	2024	Primary data	1%
Production of steel	Database	Ecoinvent v3.10	2024	Secondary data	7%
Total share of primary data, of GWP-GHG results for A1-A3*					13%

* The share of primary data is calculated based on GWP-GHG results. It is a simplified indicator for data quality that supports the use of more primary data, to increase the representativeness of and comparability between EPDs. Note that the indicator does not capture all relevant aspects of data quality and is not comparable across product categories.

ENVIRONMENTAL PERFORMANCE

LCA results of the product - main environmental performance results

The results presented in the following sections refer to the average results of the different variants of the product analysed.

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

Inventory indicators relating to the use of renewable and non-renewable secondary fuels, as well as hazardous and non-hazardous waste disposed, have been assumed 0, as these flows are not significant for the products under analysis.

The results of the end-of-life stage (modules C1-C4) should be considered when using the results of the product stage (modules A1-A3).

Mandatory impact category indicators according to EN 15804

Additional LCA results (other environmental performance results) of the product(s)

As per the PCR, results for the 100% recycling and 100% disposal end-of-life scenarios are provided below.

The results of the 100% recycling end-of-life scenario are shown below.

Mandatory impact category indicators according to EN 15804 (100% recycling end-of-life scenario)

Results per declared unit						
Indicator	Unit	C1	C2	C3	C4	D
GWP-total	kg CO ₂ eq.	3,70E-01	1,22E+01	3,20E+01	0,00E+00	-1,92E+02
GWP-fossil	kg CO ₂ eq.	3,70E-01	1,22E+01	1,65E+01	0,00E+00	-1,92E+02
GWP-biogenic	kg CO ₂ eq.	2,43E-05	7,97E-04	1,55E+01	0,00E+00	3,49E-02

ADDITIONAL ENVIRONMENTAL INFORMATION

In accordance with CAM⁵ requirements, the following table details the content of recovered, recycled, or by-product material, calculated in compliance with the methodologies established by the CAM Decrees, distinguishing between the supply of steel from the integrated route and from the electric arc furnace route.

	Steel from integrated cycle	Steel from electric arc furnace (EAF)
Total recycled material content (pre- and post-consumer)	0%	83%
Total recovered material content	0%	0%
Total co-product content	0%	0%
Supply used for the EPD calculation	0%	100%

ADDITIONAL SOCIAL AND ECONOMIC INFORMATION

The company has obtained certification of its gender equality management system in accordance with UNI/PdR 125.

⁵ Ministry of Ecological Transition, 2022, Legislative Decree of 23 June 2022: “Minimum Environmental Criteria for the awarding of design services for building works, for the awarding of construction works, and for the joint awarding of design and construction works for building interventions”, Criterion 2.5.4 Steel; and Ministry of Ecological Transition, 2024, Decree of 5 August 2024: “Minimum Environmental Criteria for the awarding of design and execution services for the construction, maintenance and upgrading of road infrastructures”, Criterion 2.3.4 Steel products.
